Session Objectives

COMMUNITY SUMMIT

1. Identify and implement at least 10 "quick win" configuration changes to the Customer Service workspace to reduce clicks and handle cases faster.
2. Understand how to refine routing rules, knowledge article structures, and SLA configurations to improve first-call resolution and customer satisfaction.
3. Discover the 'hidden' AI and productivity settings that are often overlooked but can have a massive impact on daily agent workflows.

@ 2026 Dynamic Communities

Session Agenda

1–10	Copilot Service workspace and productivity tools
11–20	Omnichannel, routing and channels
21–30	Copilot for service representatives
31–40	AI agents
41–50	Supervisors, quality and administration

@ 2026 Dynamic Communities

The largest independent Microsoft AI & Business Applications User Conference on the planet.

COMMUNITY SUMMIT

TIPS 1–10

Copilot Service workspace and productivity tools

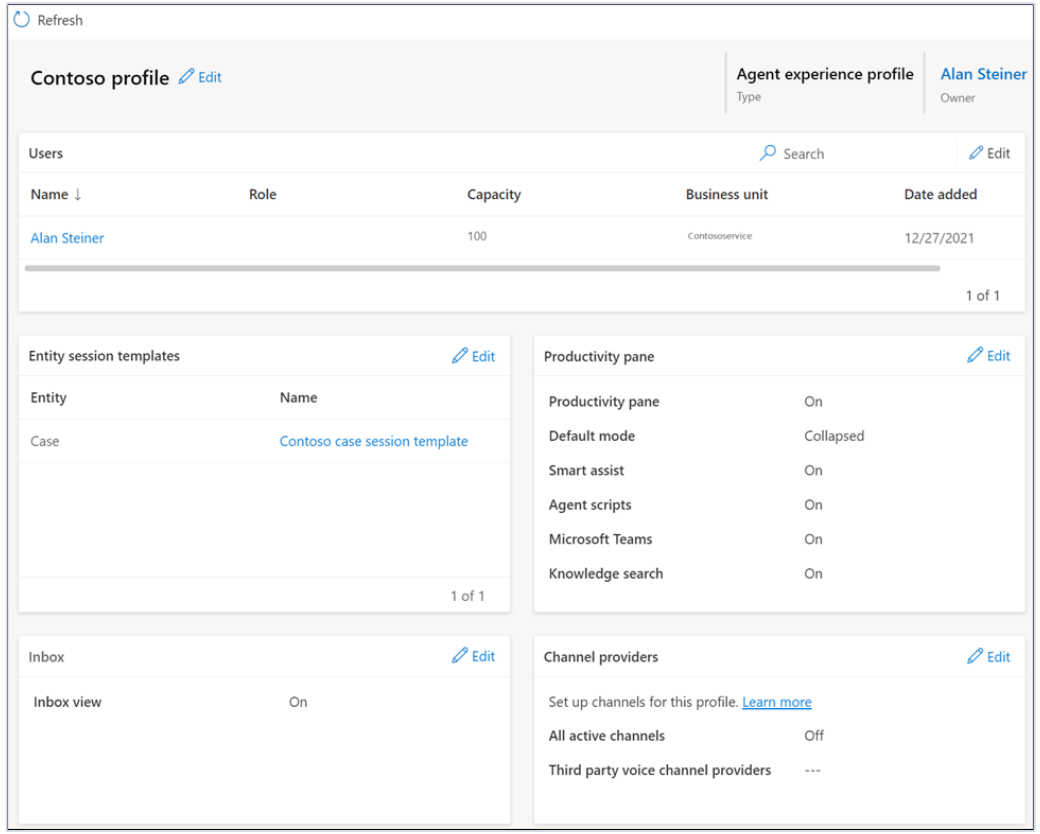

@ 2026 Dynamic Communities

Use experience profiles instead of building custom apps

TIP 01 / 50 · WORKSPACE AND PRODUCTIVITY

Experience profiles give each team its own session templates, channels and productivity tools inside one workspace app, so there is far less to build and maintain.

Where: Copilot Service admin center → Support experience → Workspaces

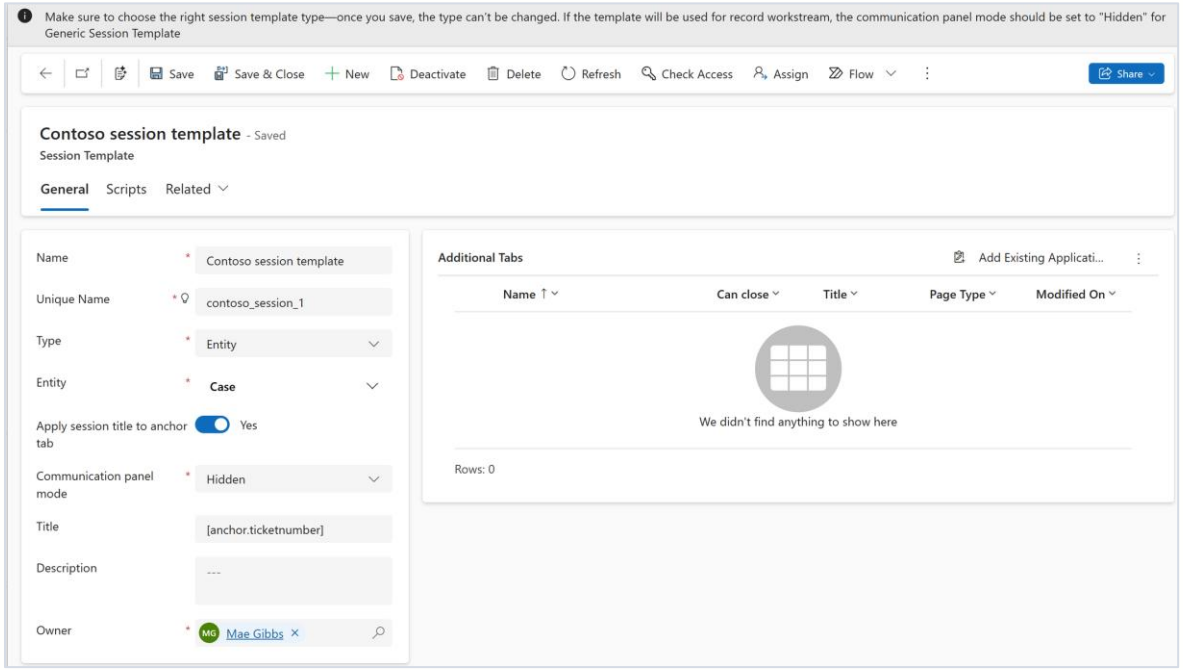

@ 2026 Dynamic Communities

Build a session template for each channel

TIP 02 / 50 · WORKSPACE AND PRODUCTIVITY

Set the anchor tab (for example, Customer summary) and add application tabs that open automatically, so reps get the right context the moment a session starts.

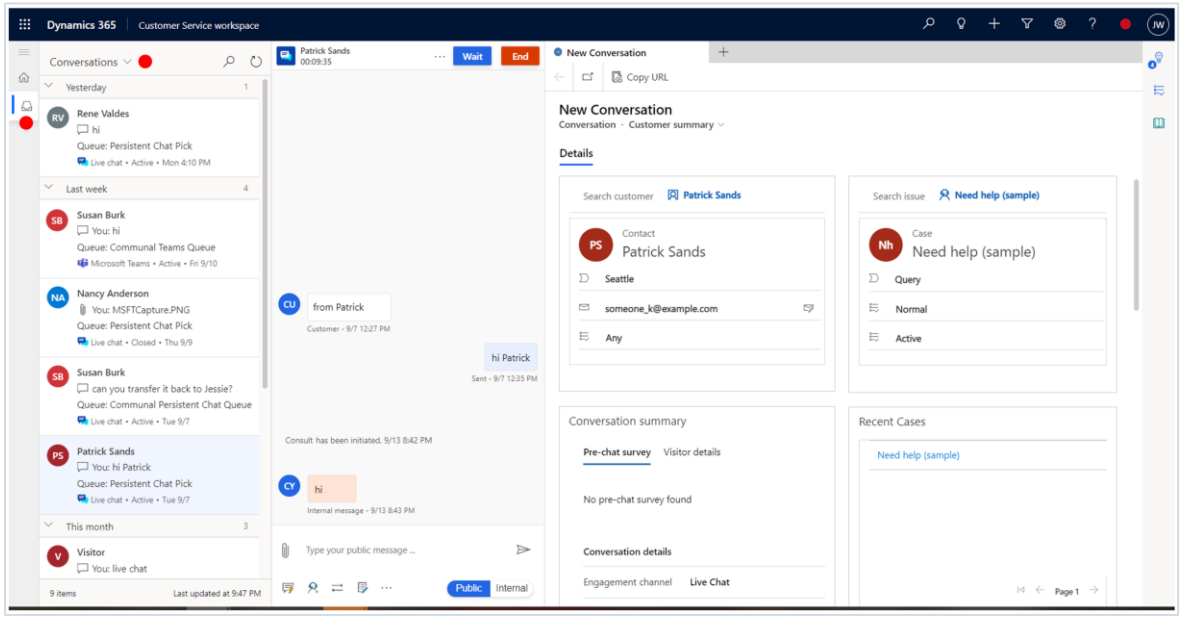

Tip within the tip: Give generic templates a channel icon so reps can spot WhatsApp vs. chat at a glance.

@ 2026 Dynamic Communities

Turn on the inbox for high-velocity work

TIP 03 / 50 · WORKSPACE AND PRODUCTIVITY

The inbox lists cases, conversations and activities in one place, including async channels like SMS, WhatsApp, Teams and persistent chat. Promote an item to a full session when it needs more time.

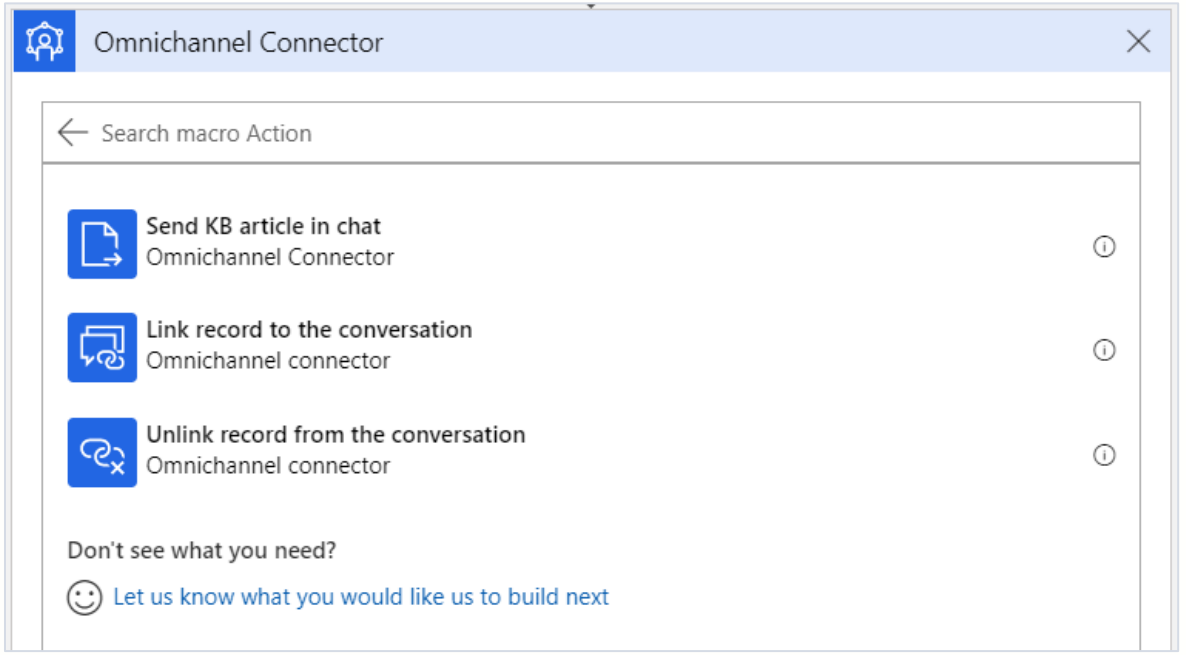

Where: Enabled per experience profile

@ 2026 Dynamic Communities

Turn repetitive clicks into macros

TIP 04 / 50 · WORKSPACE AND PRODUCTIVITY

Macros chain actions like opening a form, prefilling fields and sending an email into one click from the productivity pane, which cuts copy-paste errors.

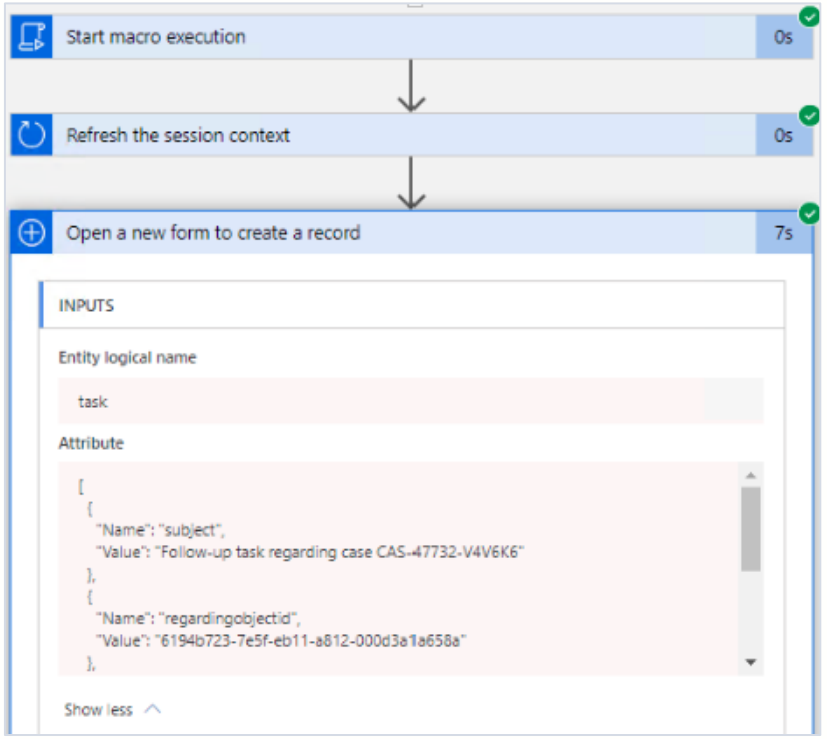

Where: Copilot Service admin center → Support experience → Productivity → Macros. Always begin with the "Start macro execution" step.

@ 2026 Dynamic Communities

Refresh the session context inside macros

TIP 05 / 50 · WORKSPACE AND PRODUCTIVITY

Session context is cached when the session starts. If a macro updates a record and then reuses its values, add “Refresh the session context” between the steps.

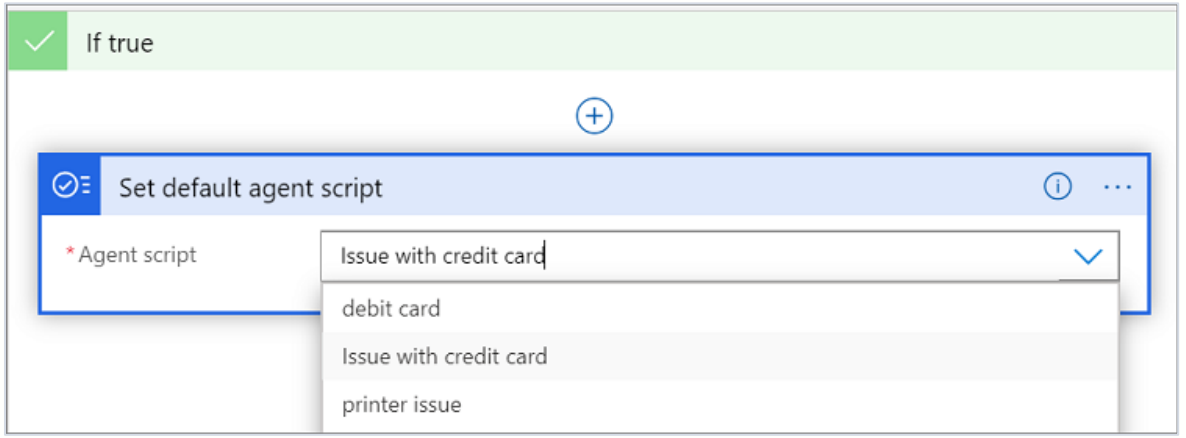

Example: Update the case title, refresh, then create a task that uses the new title.

@ 2026 Dynamic Communities

Guide reps with scripts, and set a default

TIP 06 / 50 · WORKSPACE AND PRODUCTIVITY

Scripts walk reps through a consistent, company-approved flow and can run macros along the way. Use a build expression on the session template to pick the default script.

Note: In the out-of-box workspace app, create a custom profile first to enable scripts.

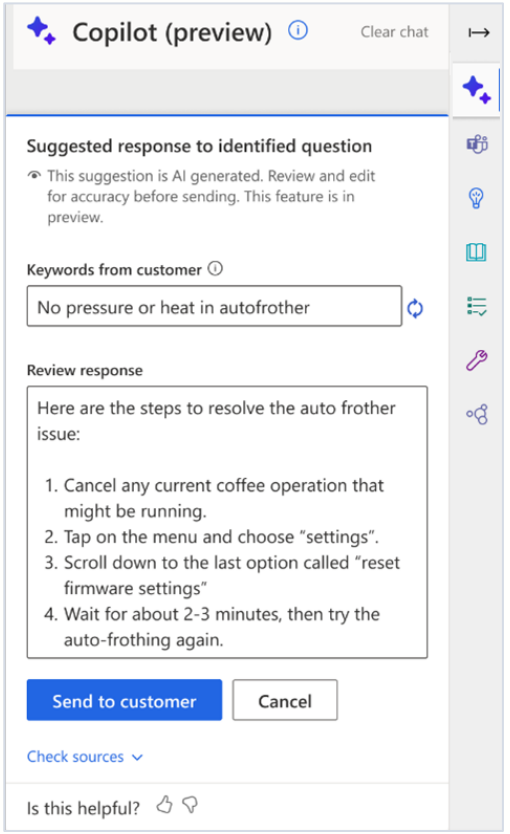

@ 2026 Dynamic Communities

Replace smart assist suggestions with Copilot

TIP 07 / 50 · WORKSPACE AND PRODUCTIVITY

Smart assist case and knowledge suggestions were retired on June 2, 2025. Make Copilot available in the productivity pane instead: reps get answers, suggested responses and knowledge grounded in your articles.

Where: Copilot Service admin center → Support experience → Productivity → Copilot settings, then enable Copilot features in the experience profile.

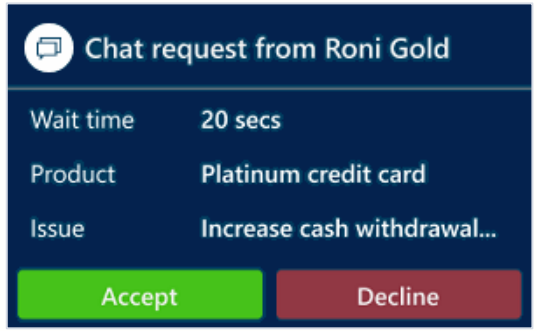

@ 2026 Dynamic Communities

Put useful context in notification templates

TIP 08 / 50 · WORKSPACE AND PRODUCTIVITY

The incoming-conversation pop-up is the rep’s first look at the customer. Add fields that help them decide fast, such as customer name, queue or wait time.

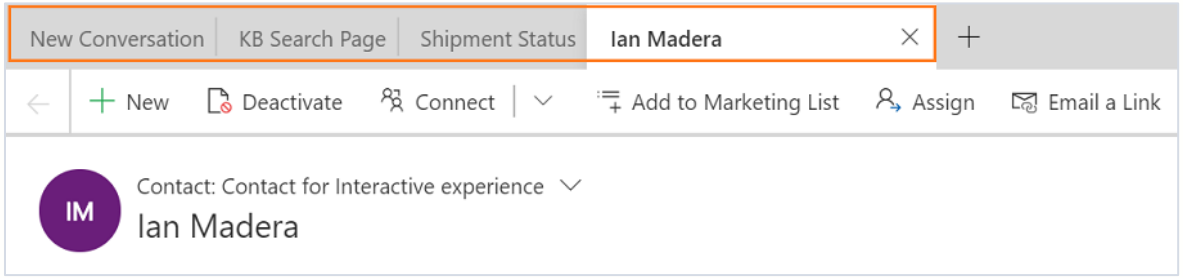

Where: Notification templates, associated with workstreams alongside session templates

@ 2026 Dynamic Communities

Bring other tools in with application tab templates

TIP 09 / 50 · WORKSPACE AND PRODUCTIVITY

Application tab templates open a dashboard, a record or a third-party web page inside the session, with context passed in, so reps stop switching windows.

Pair with: Session templates (tip 02) to open them automatically.

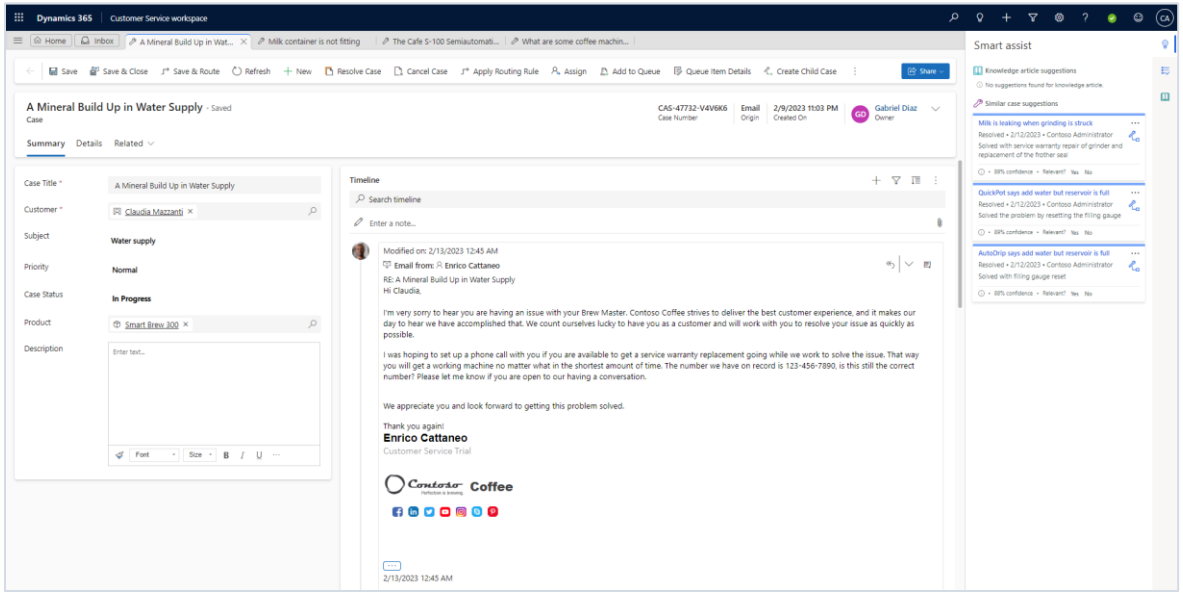

@ 2026 Dynamic Communities

Grab the “Copilot Service workspace in a day” training

COMMUNITY SUMMIT

TIP 10 / 50 · WORKSPACE AND PRODUCTIVITY

Microsoft’s free kit covers sessions and tabs, experience profiles, templates, scripts, macros, moving profiles with solutions and the multisession APIs.

Where: Linked from the “Get started with Copilot Service workspace” page on Microsoft Learn

The largest independent Microsoft AI & Business Applications User Conference on the planet.

COMMUNITY SUMMIT

TIPS 11–20

Omnichannel, routing and channels

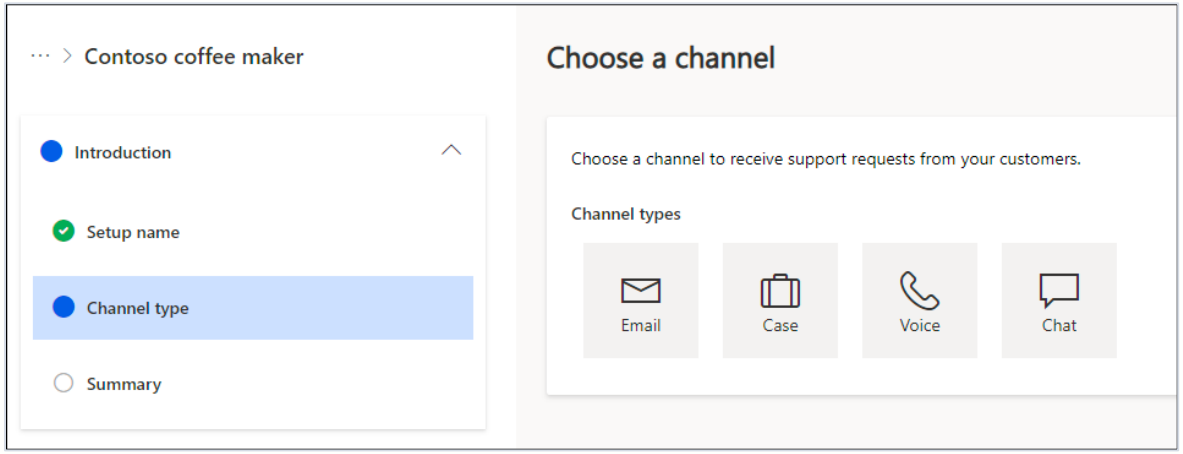

@ 2026 Dynamic Communities

Start with the guided setup, not a blank page

TIP 11 / 50 · OMNICHANNEL AND ROUTING

The admin center’s guided channel setup creates the channel, configures users and permissions and sets up starter routing rules in a few steps. Refine from there.

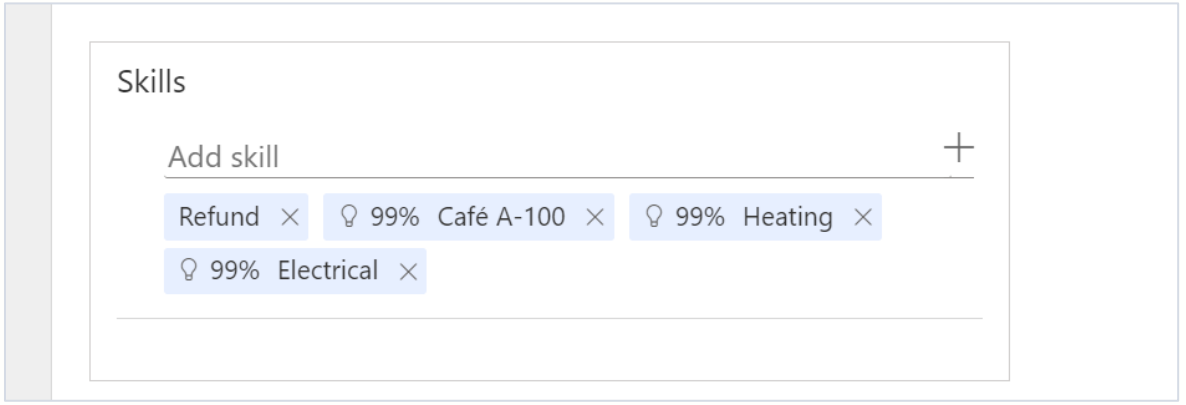

Good for: Proofs of concept and new environments

@ 2026 Dynamic Communities

Manage skills in bulk with the Skills Hub

TIP 12 / 50 · OMNICHANNEL AND ROUTING

Set up skills-based routing and update skills for many users at once, so you can react quickly when demand shifts between languages or products.

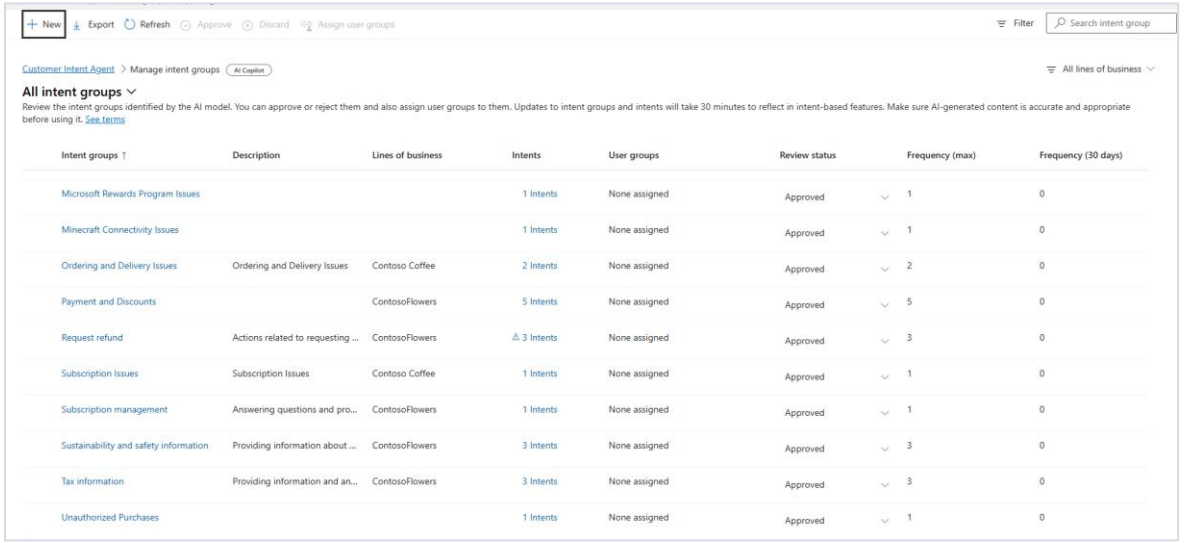

Keep it simple: A few well-defined skills beat dozens nobody maintains.

@ 2026 Dynamic Communities

Route on what the customer actually wants

TIP 13 / 50 · OMNICHANNEL AND ROUTING

Intent-driven routing captures the customer's intent from the incoming conversation and maps it to the representatives best placed to help.

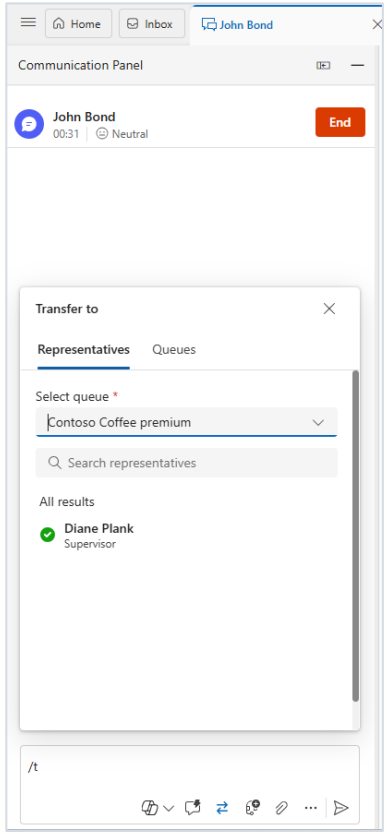

Pairs with: Customer Intent Agent (tip 39), which discovers and suggests intents for you

@ 2026 Dynamic Communities

Transfer by intent, not by guesswork

TIP 14 / 50 · OMNICHANNEL AND ROUTING

Reps can use intent to pick the right workgroup, queue or individual representative when they transfer, instead of hunting through queue names.

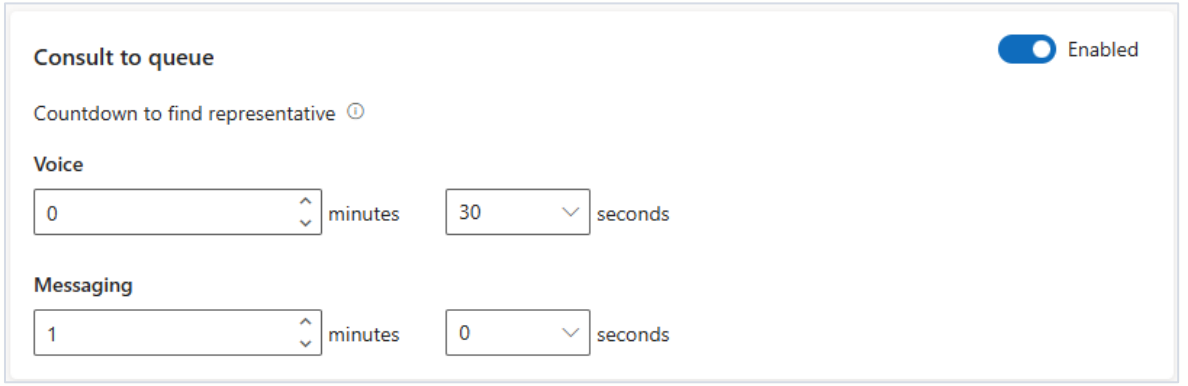

Availability: Generally available since January 2026 (Contact Center)

@ 2026 Dynamic Communities

Use consult-to-queue for smoother warm transfers

TIP 15 / 50 · OMNICHANNEL AND ROUTING

Reps can consult a queue rather than a named person, so they reach whoever is available. If a warm transfer is declined, the consultee stays free for other work.

Setup: Admins configure consult-to-queue options

@ 2026 Dynamic Communities

Pin the contacts and queues you transfer to most

TIP 16 / 50 · OMNICHANNEL AND ROUTING

Pinned contacts and queues sit at the top of the consult and transfer list, so the usual destinations are one click away during a live call.

Availability: Generally available since June 2026 (Contact Center)

16

LEARN MORE ON MICROSOFT LEARN

Enable consult and transfer settings for representatives

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Tell waiting customers where they stand

TIP 17 / 50 · OMNICHANNEL AND ROUTING

Turn on queue position and average-wait-time updates for chat, plus an automatic "wait times are longer than expected" message past a threshold you set.

Also new: Average wait time support for messaging API channels (June 2026)

17

LEARN MORE ON MICROSOFT LEARN

Show customers their average wait time in a queue

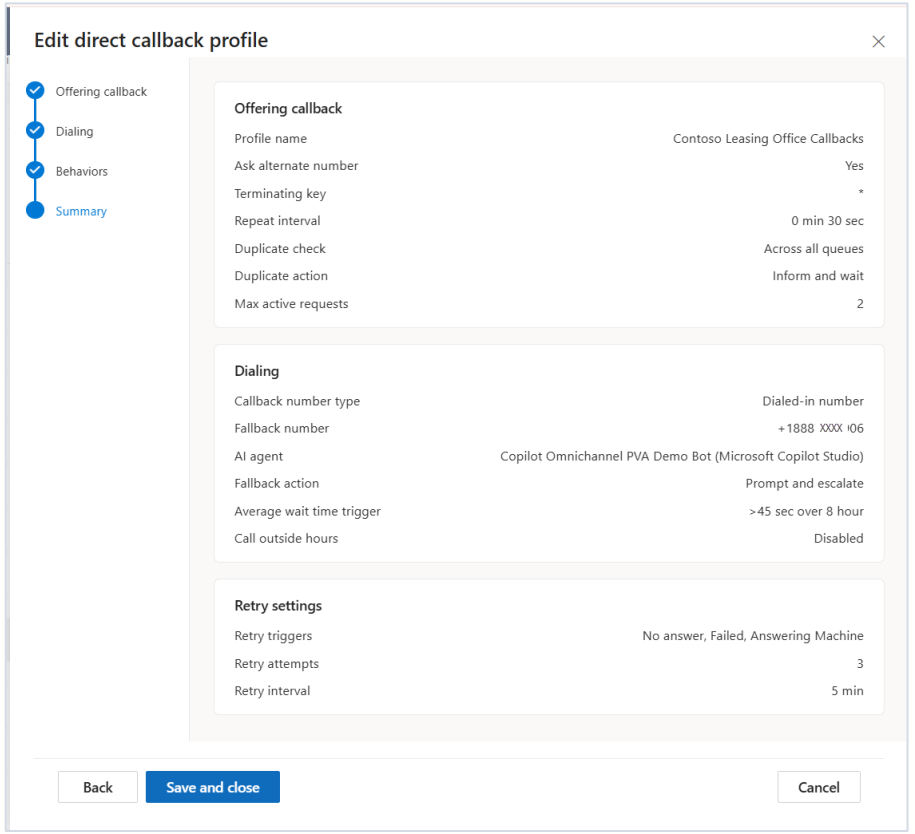

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Offer callbacks instead of hold music

TIP 18 / 50 · OMNICHANNEL AND ROUTING

Enhanced customer-first direct callbacks let callers keep their place without waiting on the line. Handling for duplicate callback requests keeps overflowing queues clean.

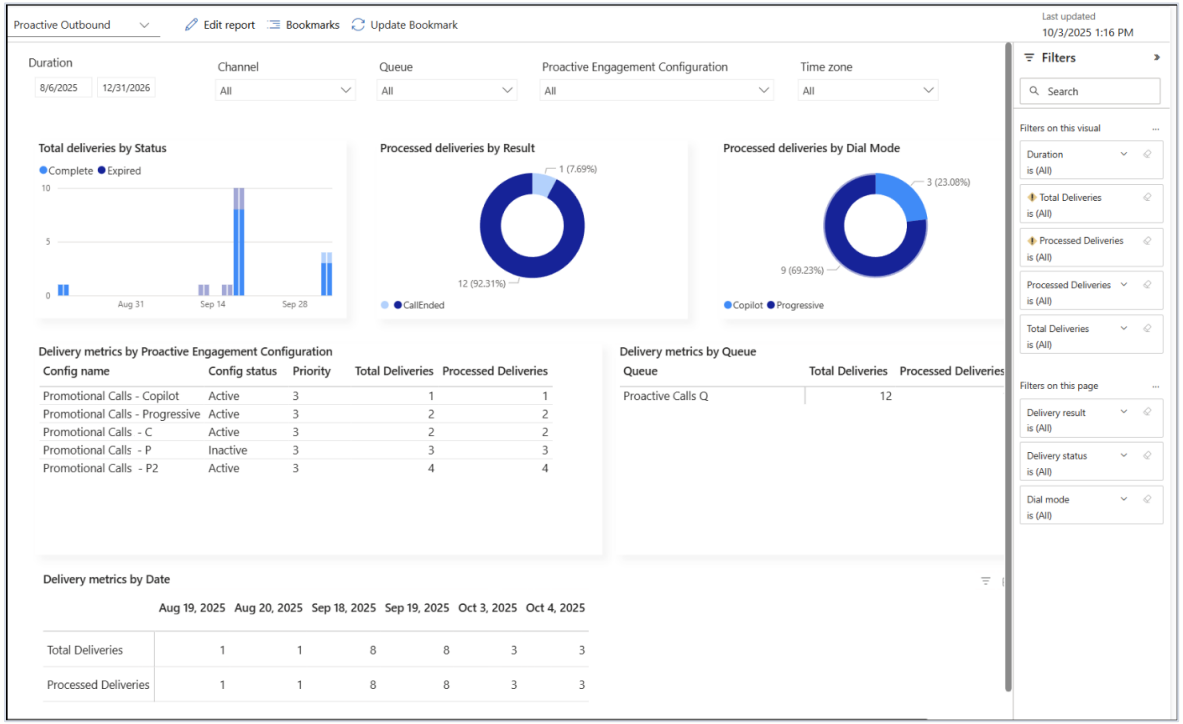

Availability: Enhanced callbacks generally available since August 2026

@ 2026 Dynamic Communities

Reach out first with proactive engagement

TIP 19 / 50 · OMNICHANNEL AND ROUTING

Run voice outbound campaigns, use preview dial for high-value calls, and send proactive SMS. Then review engagement outcomes to see what worked.

Availability: Outbound campaigns and preview dial GA March 2026; proactive SMS GA April 2026

@ 2026 Dynamic Communities

Check the deprecations page every release

TIP 20 / 50 · OMNICHANNEL AND ROUTING

Apple Messages for Business configuration is removed as of September 30, 2026. Conversation forecasting ends October 30, 2026; move to forecast scenarios in workforce engagement management.

Where: "Deprecations in Dynamics 365 Contact Center" on Microsoft Learn

COMMUNITY SUMMIT

TIPS 21–30

Copilot for service representatives

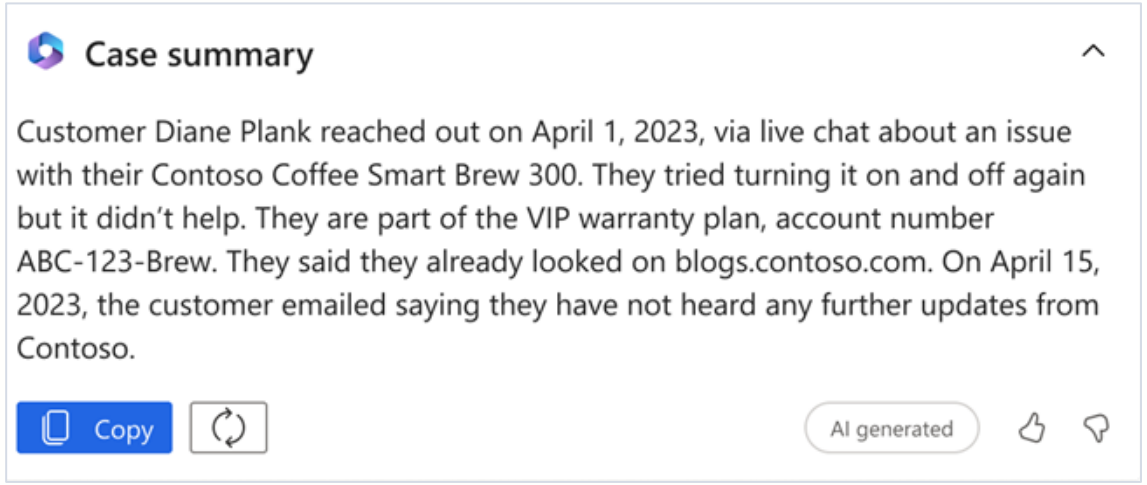

@ 2026 Dynamic Communities

Summarize at every handoff

TIP 21 / 50 · COPILOT FOR REPS

Copilot generates case and conversation summaries in one step. Use them on transfer so the next rep is up to speed, and at wrap-up to cut after-call work.

Coaching point: Teach reps to skim the summary before greeting a transferred customer.

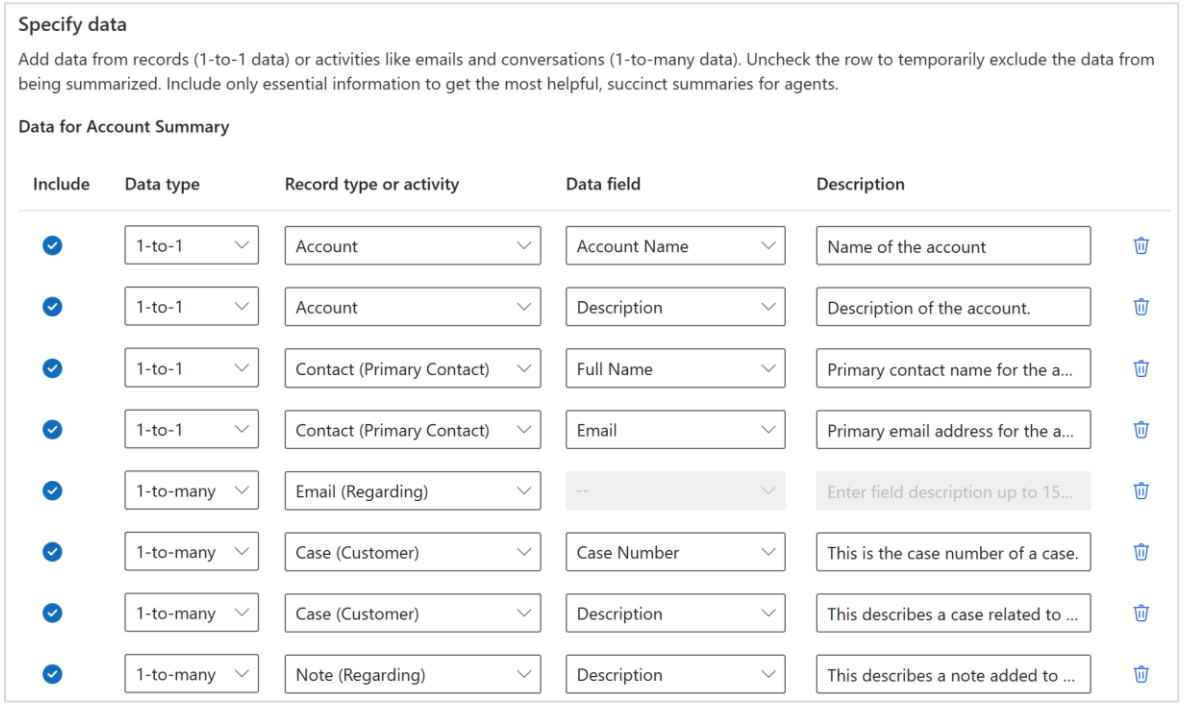

@ 2026 Dynamic Communities

Customize what the summaries include

TIP 22 / 50 · COPILOT FOR REPS

Case summaries can draw on a wide range of attributes and related or custom record types, and you can create custom summaries for any record type.

Ask your reps: Which three fields do they always look for first? Put those in.

Specify data

Add data from records (1-to-1 data) or activities like emails and conversations (1-to-many data). Uncheck the row to temporarily exclude the data from being summarized. Include only essential information to get the most helpful, succinct summaries for agents.

Data for Account Summary

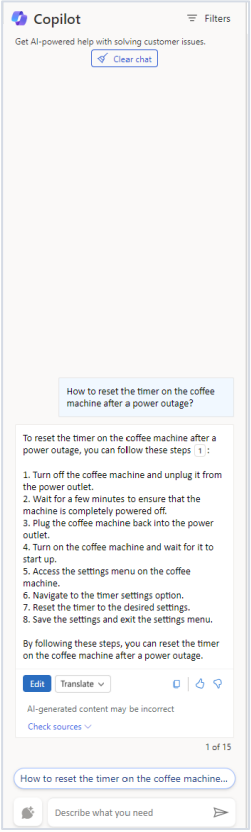

Include	Data type	Record type or activity	Data field	Description
✓	1-to-1	Account	Account Name	Name of the account
✓	1-to-1	Account	Description	Description of the account.
✓	1-to-1	Contact (Primary Contact)	Full Name	Primary contact name for the a...
✓	1-to-1	Contact (Primary Contact)	Email	Primary email address for the a...
✓	1-to-many	Email (Regarding)	--	Enter field description up to 15...
✓	1-to-many	Case (Customer)	Case Number	This is the case number of a case.
✓	1-to-many	Case (Customer)	Description	This describes a case related to ...
✓	1-to-many	Note (Regarding)	Description	This describes a note added to ...

@ 2026 Dynamic Communities

Ground “Ask a question” in sources you trust

TIP 23 / 50 · COPILOT FOR REPS

Copilot answers from your knowledge base and trusted domains you choose. Curate those sources carefully: answer quality depends on them.

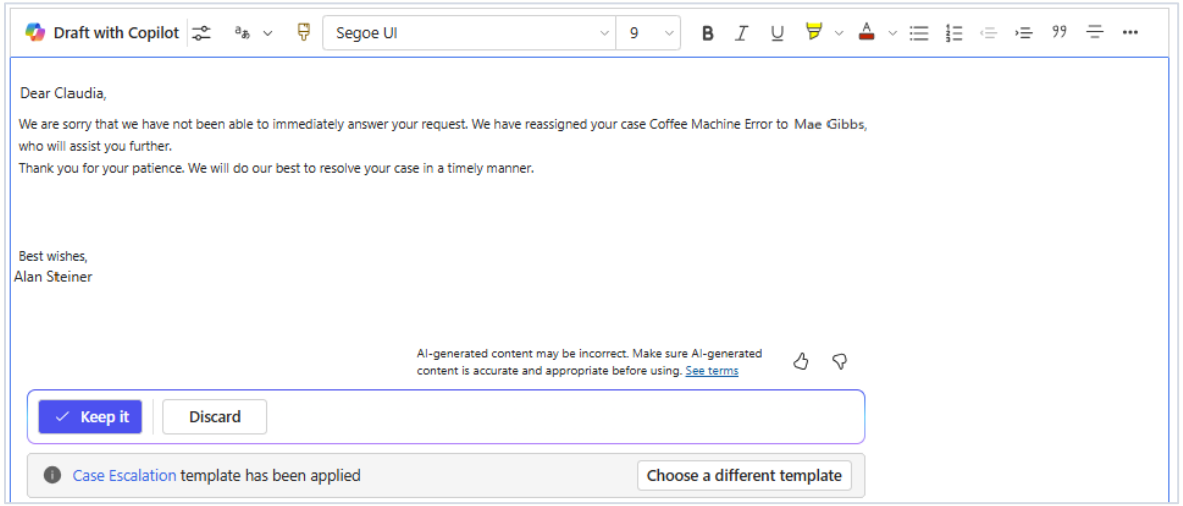

Quick win: Retire outdated knowledge articles before you switch it on.

@ 2026 Dynamic Communities

Draft emails with Copilot, then edit

TIP 24 / 50 · COPILOT FOR REPS

Copilot drafts contextual email responses from the case and your knowledge. Treat it as a first draft: reps review, adjust tone and send.

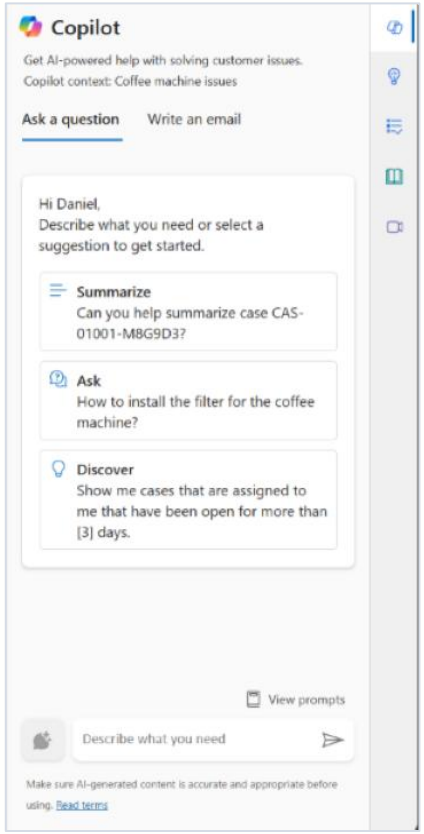

Heads-up: The older "Draft a chat response" preview was deprecated in July 2025.

@ 2026 Dynamic Communities

Use Copilot’s proactive prompts

TIP 25 / 50 · COPILOT FOR REPS

Copilot suggests prompts and insights based on what the rep is working on, so new reps don’t have to know the right question to ask.

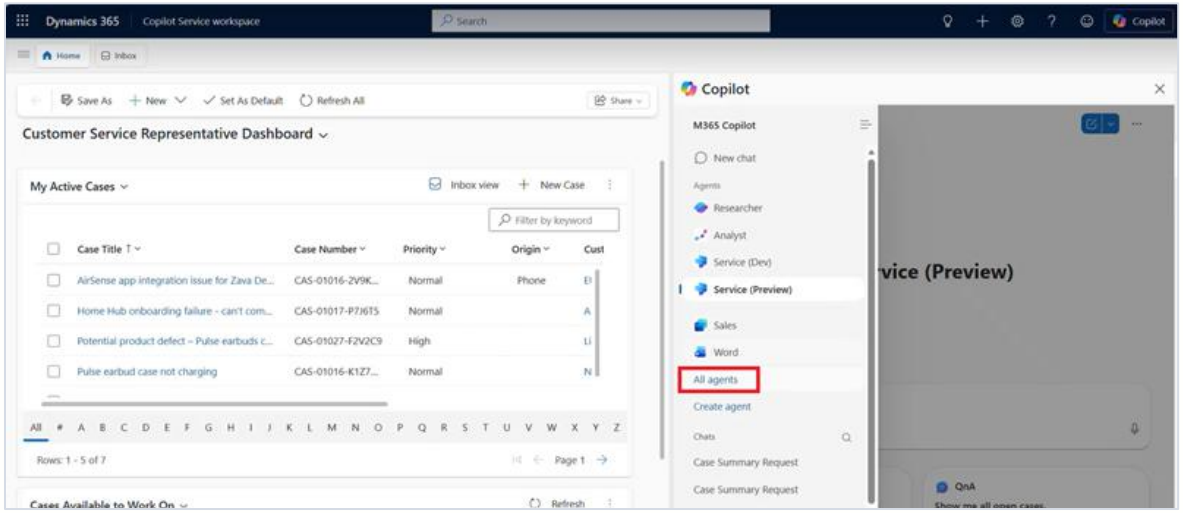

Availability: On for users automatically since November 2024

@ 2026 Dynamic Communities

Let reps do tasks in plain language with Service Agent

TIP 26 / 50 · COPILOT FOR REPS

Service Agent works in Copilot Service workspace to look things up, summarize, draft communications, update cases and create notes without leaving the conversation.

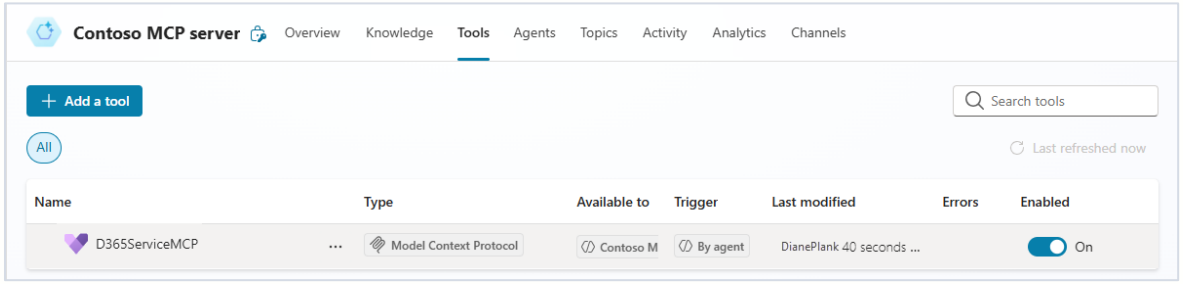

Setup: The Service app installs automatically with a Customer Service license; an admin then adds Microsoft Copilot to the environment.

@ 2026 Dynamic Communities

Use Service Agent from Microsoft 365 Copilot too

TIP 27 / 50 · COPILOT FOR REPS

Service Agent is also a Microsoft 365 Copilot agent, grounded in both Dataverse and Microsoft Graph. People outside the workspace can check and update service data from Teams or Outlook.

Extend it: Add your own tools via custom MCP (Model Context Protocol) servers

@ 2026 Dynamic Communities

Show customer sentiment right on the case

TIP 28 / 50 · COPILOT FOR REPS

Sentiment indicators on the case form flag frustrated customers before the rep reads the full history, so they can adjust tone or escalate early.

Availability: 2026 release wave 1, enabled by admins

28

LEARN MORE ON MICROSOFT LEARN

Configure sentiment analysis for case

Open the article on Microsoft Learn ›

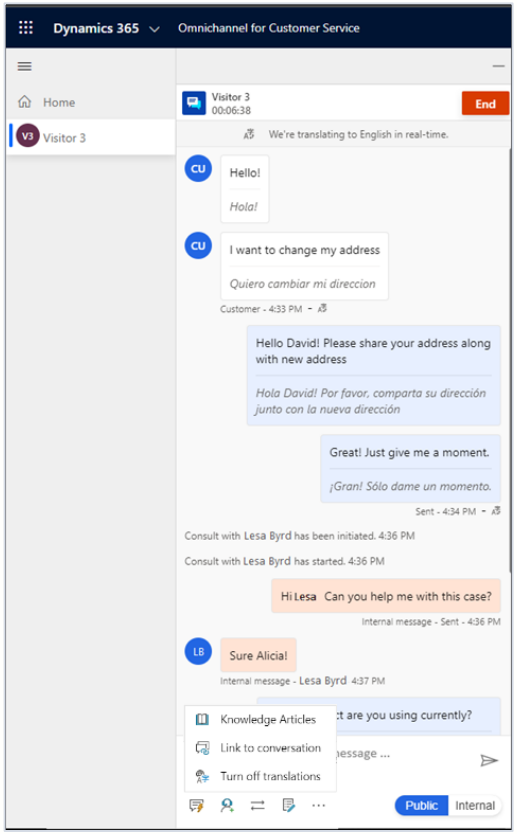

@ 2026 Dynamic Communities

Serve more languages with real-time translation

TIP 29 / 50 · COPILOT FOR REPS

Real-time translation lets a rep chat with a customer in a language they don’t speak. Recent updates made translation faster and more consistent.

Availability: Enhanced real-time translation entered preview September 2026

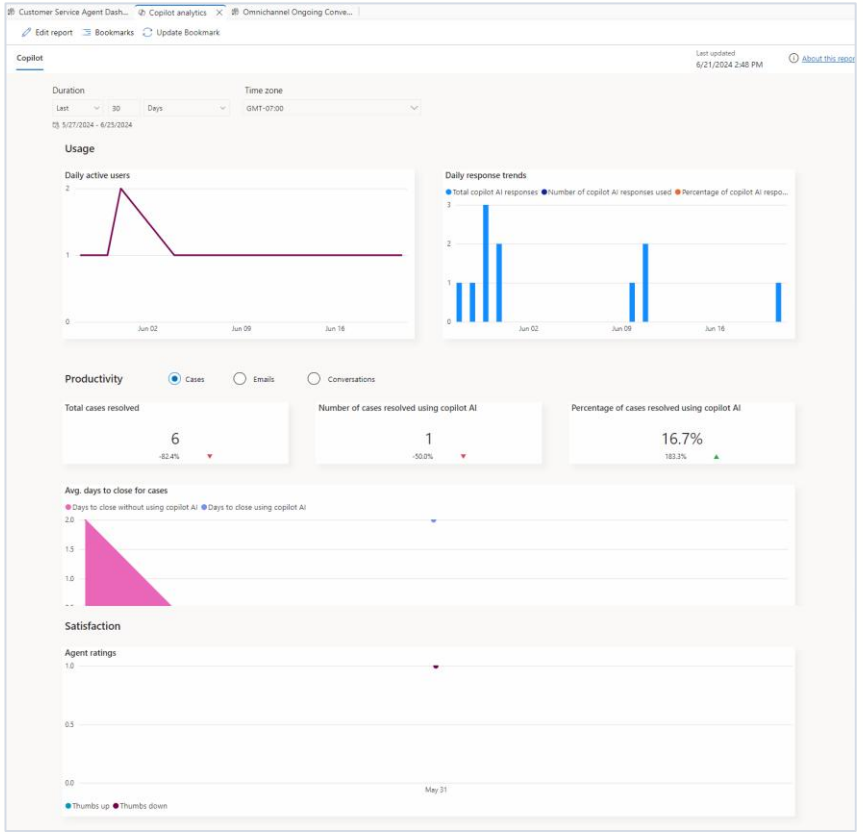

@ 2026 Dynamic Communities

Record how reps use AI, and their feedback

COMMUNITY SUMMIT

TIP 30 / 50 · COPILOT FOR REPS

Turn on recording of rep interactions with AI, including their thumbs up or down on suggestions. Download the data to see what helps and where knowledge is thin.

Why: It turns "is Copilot worth it?" into a question you can answer with data.

@ 2026 Dynamic Communities

The largest independent Microsoft AI & Business Applications User Conference on the planet.

COMMUNITY SUMMIT

TIPS 31–40

AI agents

@ 2026 Dynamic Communities

Switch on AI agents at the environment level first

TIP 31 / 50 · AI AGENTS

Before any agent appears in Customer Service, an admin has to enable AI agents for the environment. It’s the step most people miss.

Where: Power Platform admin center → Copilot → Settings → Agents → pick the environment → “Enable AI agents”

31

LEARN MORE ON MICROSOFT LEARN

Configure Case Management Agent

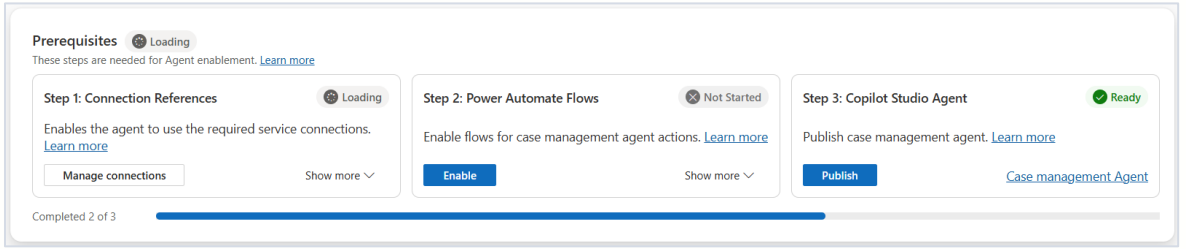

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Let the Case Management Agent fill in case forms

TIP 32 / 50 · AI AGENTS

The agent creates and updates cases from chats, voice and email, predicting the fields you choose. It only fills a field when the conversation gives it enough context.

Where: Customer support → Case settings → Case Management Agent → Manage

@ 2026 Dynamic Communities

Add conditional update rules

TIP 33 / 50 · AI AGENTS

Case update rules tell the agent which extra fields to predict when a condition is met. For example, when Case category equals Product defect, also fill Product, Priority and Serial number.

Start small: One or two rules for your highest-volume case types

33

LEARN MORE ON MICROSOFT LEARN

Set up Case Management Agent for case creation and update

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Start semi-autonomous, then earn full autonomy

COMMUNITY SUMMIT

TIP 34 / 50 · AI AGENTS

For case resolution and follow-up, run the agent with a human in the loop: it drafts, reps approve. Move to fully autonomous once you trust the results.

Fully autonomous needs: An application user and a shared mailbox to send email

34

LEARN MORE ON MICROSOFT LEARN

Set up Case Management Agent to resolve cases

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Test the agent in shadow mode before go-live

TIP 35 / 50 · AI AGENTS

Shadow mode lets you assess the Case Management Agent's predictions without acting on them, and you can simulate case-resolution flows before production.

Availability: Both in 2026 release wave 1

35

LEARN MORE ON MICROSOFT LEARN

Set up Case Management Agent to resolve cases

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Classify incoming email automatically

TIP 36 / 50 · AI AGENTS

The Case Management Agent can sort emails into predefined categories and subcategories, which drives routing and automation without manual triage.

Availability: Predefined categories GA April 2026; category and subcategory GA August 2026

36

LEARN MORE ON MICROSOFT LEARN

Configure email classification

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Automate follow-up and closure

TIP 37 / 50 · AI AGENTS

After resolution, the agent can send follow-up emails on a cadence, write a closing summary and close the case once your rules are met. No more cases left open for weeks.

Reps need access: Enable it in their experience profile under Copilot AI features

37

LEARN MORE ON MICROSOFT LEARN

Set up Case Management Agent for case follow-up and closure

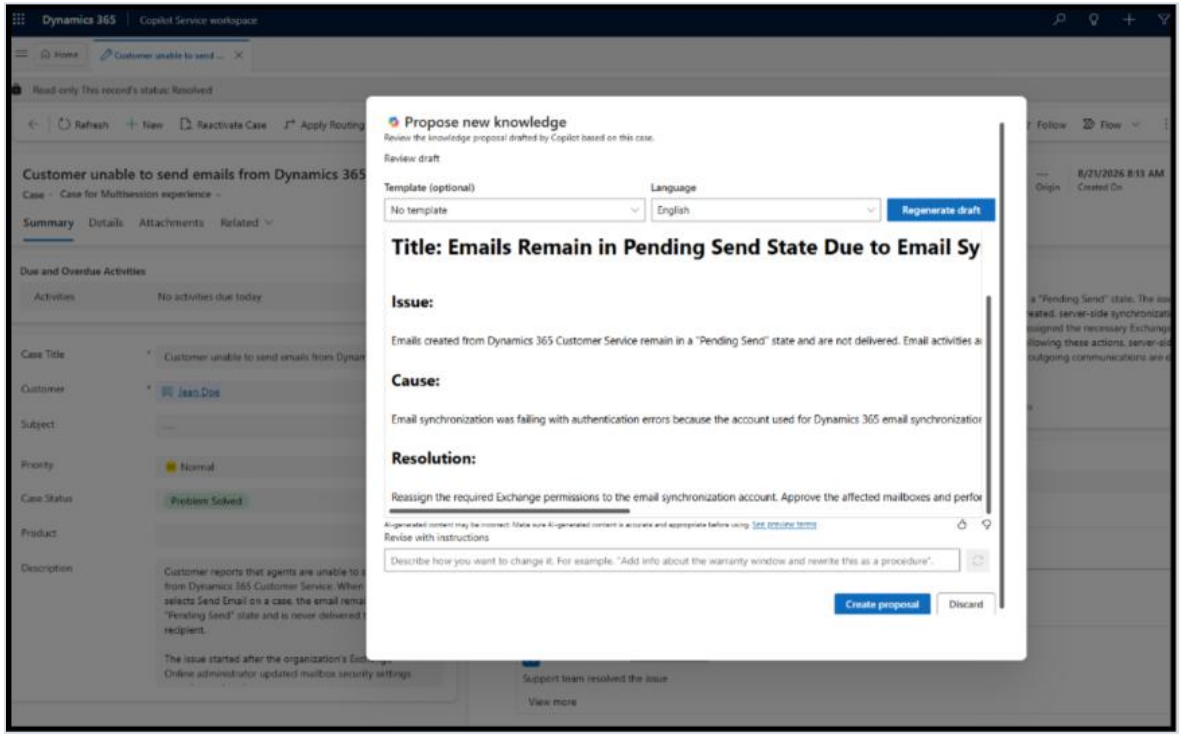

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Turn closed cases into knowledge

TIP 38 / 50 · AI AGENTS

The Customer Knowledge Management Agent analyzes closed cases, drafts or updates knowledge articles and helps fill gaps, so knowledge keeps up with real issues.

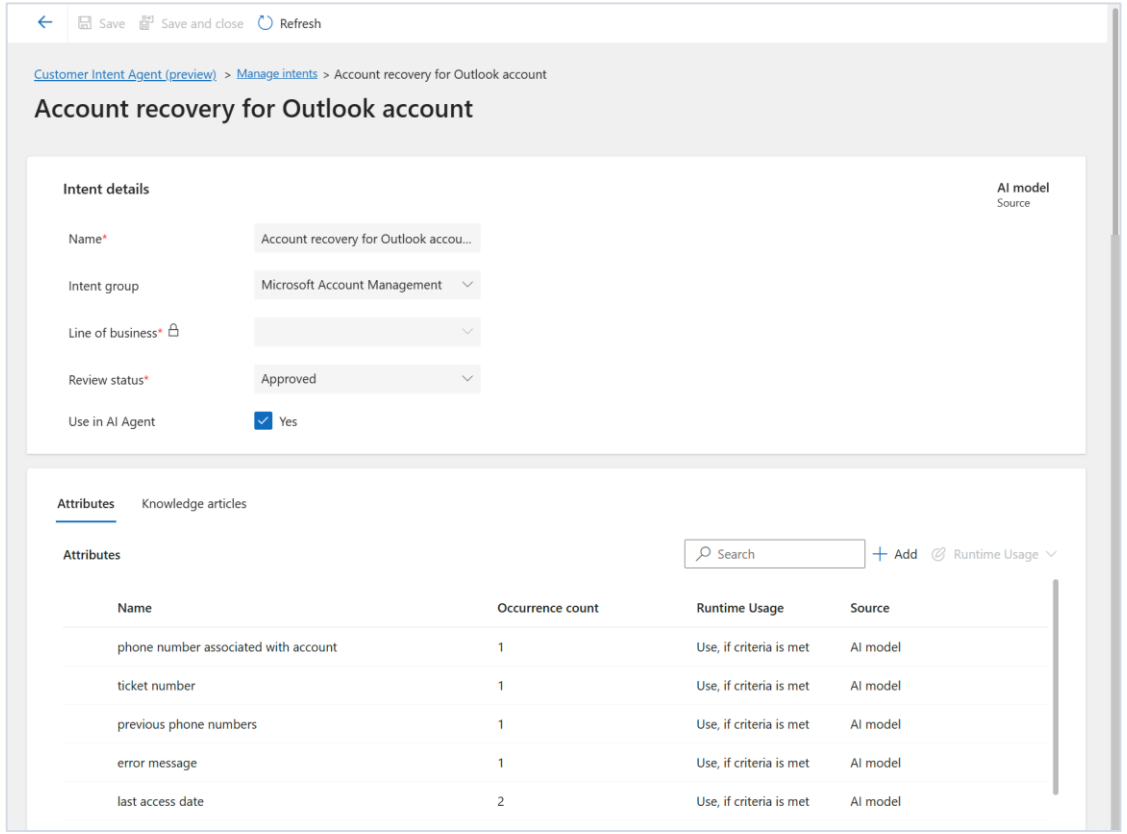

Availability: Generally available since October 2025

@ 2026 Dynamic Communities

Let the Customer Intent Agent find your top contact reasons

TIP 39 / 50 · AI AGENTS

It discovers common intents from your conversations and suggests new ones. The voice version uses intents in self-service to ask follow-up questions and resolve issues.

Availability: Autonomous resolution GA October 2025; voice GA November 2025

@ 2026 Dynamic Communities

Don’t start from scratch: use agent templates

TIP 40 / 50 · AI AGENTS

Microsoft publishes service agent templates such as After Hours Service, Case Categorization and Enrichment, and Automated Case Follow-ups. You can also plug custom Copilot Studio agents into the Case Management Agent.

Where: “Service agent templates” in the Dynamics 365 implementation guidance on Microsoft Learn

40

COMMUNITY SUMMIT

TIPS 41–50

Supervisors, quality and administration

@ 2026 Dynamic Communities

Score every interaction, not a random 2%

TIP 41 / 50 · SUPERVISORS, QUALITY AND ADMIN

The Quality Evaluation Agent assesses cases and conversations against the evaluation criteria your supervisors define, autonomously or as AI-assisted reviews.

Availability: Closed conversations GA January 2026; batch evaluation of multiple conversations GA May 2026

41

LEARN MORE ON MICROSOFT LEARN

Manage quality evaluation

Open the article on Microsoft Learn ›

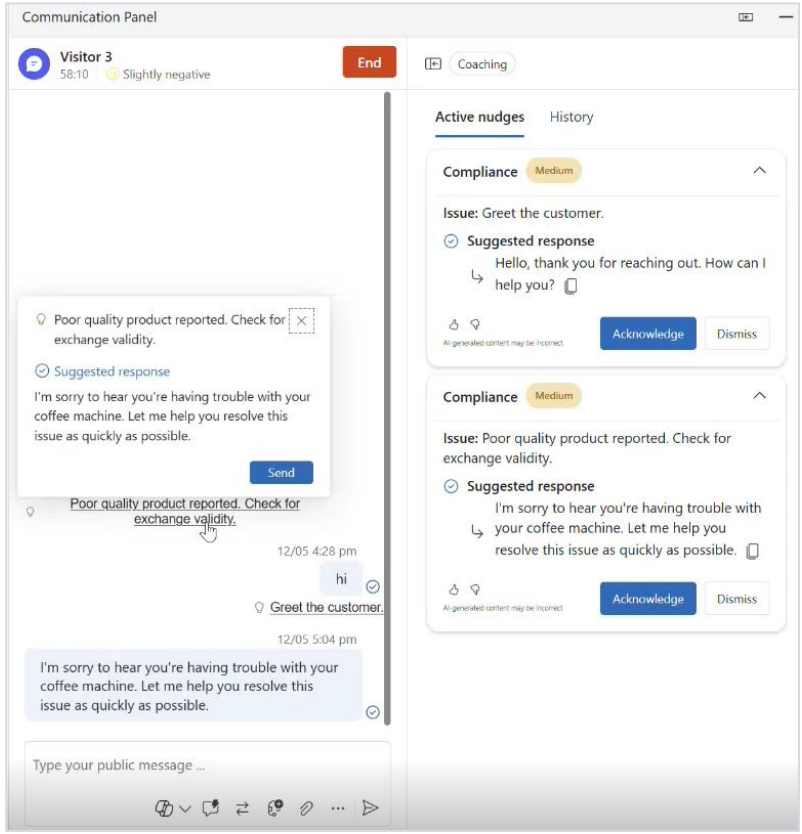

@ 2026 Dynamic Communities

Coach in the moment with the Quality Assurance Agent

COMMUNITY SUMMIT

TIP 42 / 50 · SUPERVISORS, QUALITY AND ADMIN

It analyzes live conversations against quality and compliance rules, then nudges reps with real-time coaching and alerts supervisors to compliance risks.

Availability: GA June 2026, Dynamics 365 Contact Center only

@ 2026 Dynamic Communities

Put guardrails on outbound email

TIP 43 / 50 · SUPERVISORS, QUALITY AND ADMIN

Governance in the Quality Management Agent checks outbound email bodies and attachments, from AI or humans, against your policies. It can log or block anything that breaks them.

Why it matters: It’s your safety net before turning on fully autonomous agents.

43

LEARN MORE ON MICROSOFT LEARN

Configure governance policies

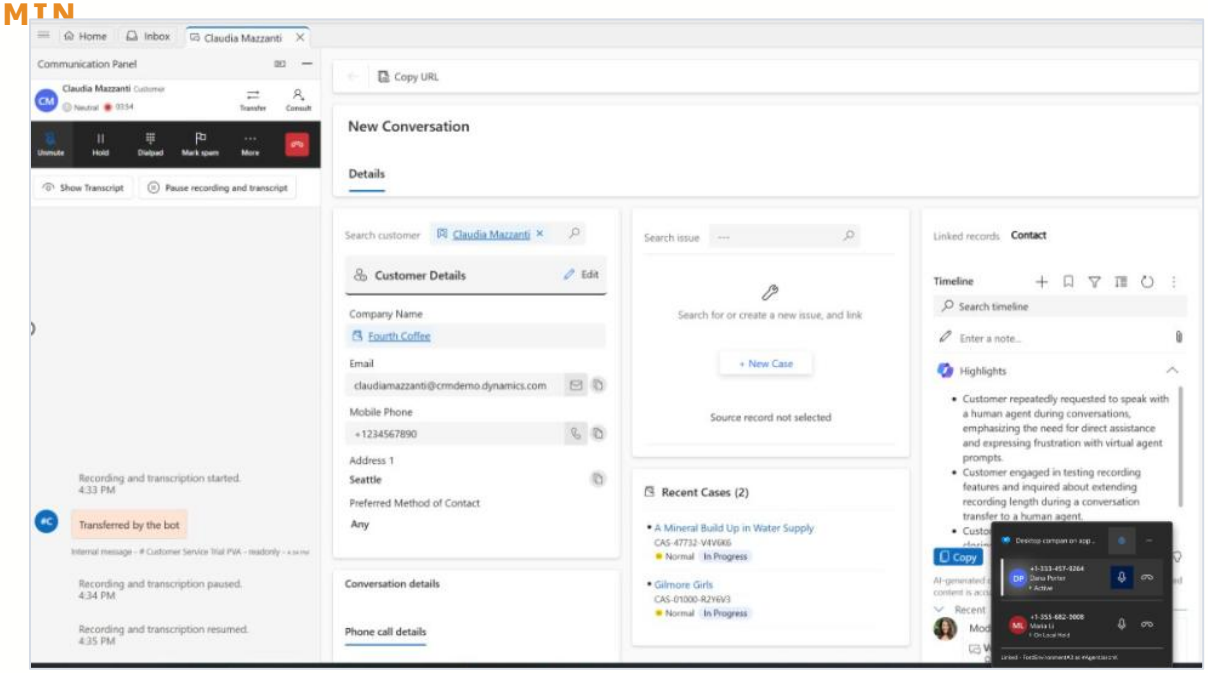

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Use screen recording to see the whole workflow

TIP 44 / 50 · SUPERVISORS, QUALITY AND ADMIN

Transcripts show what was said; screen recordings show what the rep did. Recording can start automatically on voice calls, and you can choose which monitors are captured.

Tell your reps: A red border shows which screen is being recorded.

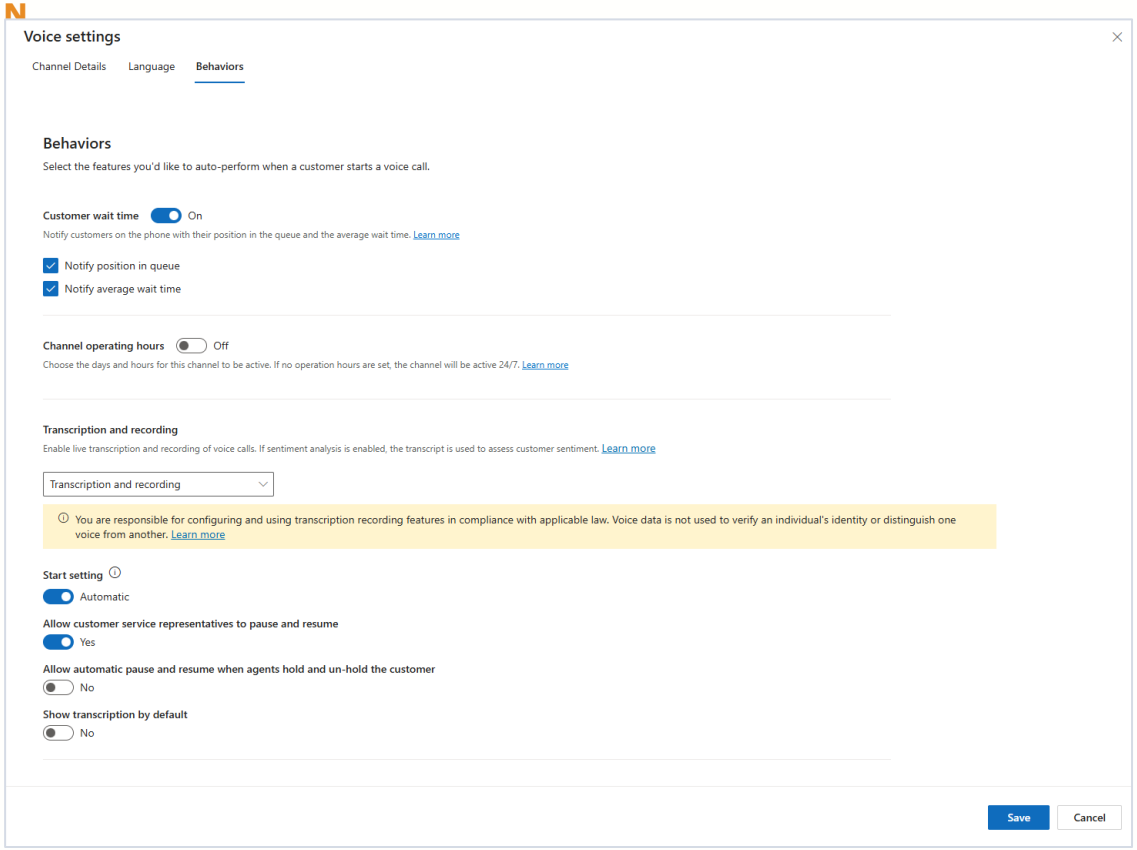

@ 2026 Dynamic Communities

Improve call quality and compliance in two settings

TIP 45 / 50 · SUPERVISORS, QUALITY AND ADMIN

Deep noise suppression cleans up background noise for remote and open-plan reps. Consent-based recording only records calls when the customer agrees.

Availability: Noise suppression GA February 2026; consent-based recording GA May 2026

@ 2026 Dynamic Communities

Let the Service Operations Agent help with admin

TIP 46 / 50 · SUPERVISORS, QUALITY AND ADMIN

It speeds up setup tasks, onboarding and checking configuration changes, so admins spend less time clicking through settings.

Availability: GA July 2026. Industry templates for autonomous contact centers entered preview July 2026.

46

LEARN MORE ON MICROSOFT LEARN

Use Service Operations Agent

Open the article on Microsoft Learn ›

@ 2026 Dynamic Communities

Manage contact center users with Entra security groups

TIP 47 / 50 · SUPERVISORS, QUALITY AND ADMIN

Add someone to the right Microsoft Entra group and they get the right contact center setup. Joiners, movers and leavers get handled where IT already works.

Availability: Generally available since July 2026

47
